SUMMARY

Backend engineer with commercial experience designing and maintaining server-side applications on Java 21/25 and Spring Boot 3/4. Focused on transactional systems (FinTech), real-time data processing (WebSocket, Redis), modular architecture (Spring Modulith), and AI agent integration (Claude API, MCP). Working with Agile (Scrum); proficient in Git, Docker, Jira, CI/CD (GitHub Actions). Ensuring 100% integration test isolation via Testcontainers.

SKILLS

- Languages:** Java (17, 21, 25), SQL, TypeScript/JavaScript (Foundations)
- Java Core:** Collections (List, Map, Set, Queue), OOP, Generics, Stream API, Optional, I/O, Concurrency (synchronized, volatile, ExecutorService, CompletableFuture, ConcurrentHashMap)
- Frameworks:** Spring Boot 3/4, Spring Modulith, Spring Data JPA / Hibernate, Spring Security, WebSocket (STOMP), Resilience4j, Bucket4j, MapStruct, Lombok
- Databases:** PostgreSQL (Transactions, Indexing, EXPLAIN ANALYZE, JSONB, Window Functions), MySQL, Redis (Caching, Queues, Pub/Sub), Flyway
- DevOps:** Git, GitHub, GitHub Actions (CI/CD), Maven, Docker / Docker Compose, Linux / Bash, Nginx
- Testing:** JUnit 5, AssertJ, Mockito, Testcontainers (PostgreSQL, Redis), Concurrency Stress Testing
- Observability & AI:** Spring Boot Actuator, Micrometer, Prometheus, Grafana, Anthropic Claude API, MCP, Postman, Swagger/OpenAPI
- Methodologies:** Agile (Scrum — 2-week sprints, Daily Standup, Sprint Review, Retro), Kanban, Jira, Confluence, Code Review (Pull Requests)
- Architecture:** Modular Monolith, Clean Architecture, DDD, Event-Driven, OOP, SOLID, DRY, KISS, YAGNI, REST API Design
- Spoken Languages:** English C1 Advanced (EF SET 70/100); Polish — beginner

WORK EXPERIENCE

Nexgen Soft — Java Backend Developer

Java 21, Spring Boot 3.3, PostgreSQL, Redis, WebSocket (STOMP), JWT, Flyway, Docker, GitHub Actions
September 2025 — Present | Remote | Outsourcing company, 30+ developers

- Developing the server side of a FinTech platform for account management, trading operations, and real-time quotes in a distributed team of 8 (2 backend, 2 frontend, QA, DevOps, PM, Team Lead).
- Designed and implemented a thread-safe in-memory order matching engine (price-time priority) for limit and market orders using Java Concurrency primitives.
- Integrated Redis for order book caching and message queuing, reducing PostgreSQL load by ~40% during peak hours.
- Engineered real-time order book and notification streaming over WebSocket (STOMP) for 200+ concurrent clients.

- Architected a 13-table PostgreSQL schema with double-entry accounting ledgers and audit trails; automated migrations via Flyway.
- Implemented role-based authentication (Spring Security + JWT) with refresh token rotation; built automated financial report export in Excel (Apache POI) and PDF (iText).
- Maintained rigorous test coverage (JUnit 5, AssertJ, Testcontainers); set up CI/CD via GitHub Actions; tracked tasks in Jira, performed code reviews via Pull Requests.

DataBridge Solutions — Software Engineer (Java / AI Integration)

Java 25, Spring Boot 4, Spring Modulith, PostgreSQL, Redis, Testcontainers, Docker

April 2025 — September 2025 | Remote | Product startup, project-based development

- Architected a 12-module modular monolith on Java 25 / Spring Boot 4 using Spring Modulith (User, Task, Reminder, Agent, Telegram, Analytics) with strict api/application/domain/infrastructure boundaries.
- Integrated Anthropic Claude API and Model Context Protocol (MCP) with dynamic contextual prompt building from user memory graphs and background fact extraction (@Async).
- Enforced high availability with Resilience4j Circuit Breakers (graceful fallback) and Bucket4j Token Bucket rate limiters.
- Engineered decoupled domain messaging using Spring Modulith ApplicationEvents; set up monitoring via Actuator + Prometheus + custom health indicator.
- Orchestrated real PostgreSQL and Redis containers with Testcontainers in JUnit 5; built Telegram bot with webhook and deep-linking.

ADDITIONAL PROJECTS

Crypto Portfolio Optimizer — desktop application for quantitative analysis

Java 21, JavaFX, ojalgo, CoinGecko API, Maven

github.com/CHIKOJgg/MarkowitzModel-java-crypto-analysis

- 12 alpha models (Momentum, EWMA, RSI, MACD, Bollinger Bands), 9 portfolio models (Markowitz, Risk Parity, HRP, CVaR, Black-Litterman), walk-forward backtesting with Monte Carlo simulation and Brinson Performance Attribution.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Major: Information Systems and Technologies

September 2024 – 2028, Minsk, Belarus

Certificate: EF SET – 70/100, C1 Advanced (cert.efset.org/ru/cAsbkU)
